

Designed For The Way You Do Business

DAIFUKU WEBB

JERVIS B. WEBB COMPANY

Innovation That Stands The Test of Time

Since 1919, Webb has been at the forefront of the material handling industry. Our roots began in the automotive industry when Jervis B. Webb created a way to adapt a forged rivetless chain used in mining to move automobile assembly lines. This single invention revolutionized mass production and its durability helped Webb set the gold standard in material handling systems.

Today, we're proud to say, Webb systems are the centerpiece of many automotive and other manufacturing facilities around the world. We're also transforming the way domestic and international airports move baggage, beverage and food manufacturers deliver their goods to store shelves and aluminum companies produce their products. Webb is now a subsidiary of Daifuku Co., Ltd. making it part of one of the largest material handling companies in the world.

No matter what your business or where you are in the world, Webb has a solution that will increase productivity, lower costs and keep your company moving forward.

Designed For The Way You Do Business

In a world that works around-the-clock, we know that every minute counts. We also know that every company reaches its peak performance in a different way. That's why at Webb, we have established teams of engineers that specialize in specific industries. They know your business, they speak your language and they understand there's no time for slowdowns. They listen, and then work with you to design a material handling system that adapts to the way you already do business – minimizing unnecessary downtime and maximizing your bottom line.

Customized Solutions That Work The Way You Do

Whether you're building a plant from the ground up or moving your facility into the future, we can integrate our products to fully automate your manufacturing facility or warehouse.

Our diversified line of products includes:

- **Conveyor systems**
- **Automatic guided vehicles (AGVs)**
- **Baggage handling systems**
- **Automated storage and retrieval systems (AS/RS)**

Commitment To Keep Your Company Up and Running

It's not only our products that you can rely on, it's our people. Our engineering teams have created material handling solutions for some of the most successful companies in the world. When you work with Webb, our team becomes your team. And you have our commitment that just like our products, our engineers are in it for the long run.

Webb Smart Handling Systems

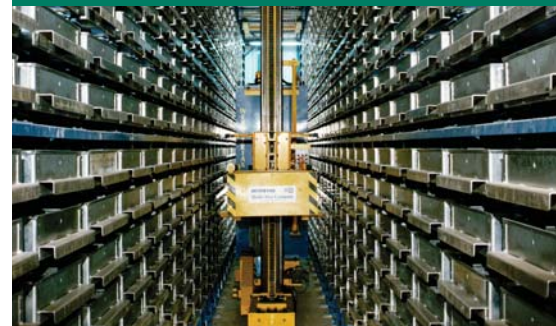

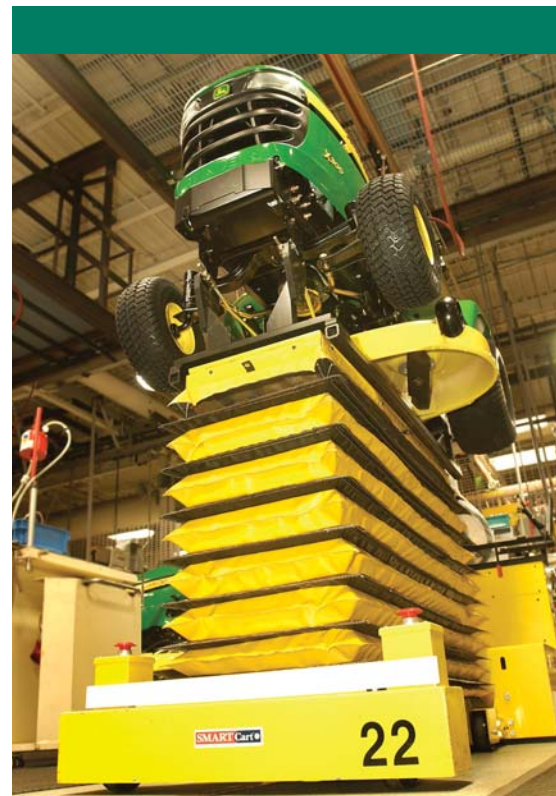

When You Can't Afford To Stop Moving 24/7 Technology

In today's global economy, you need a material handling system that keeps your business moving, even while you sleep. That's why Webb developed Smart technology, an innovative 24/7 workforce that fully automates your facility.

Designed specifically to meet your manufacturing, distribution and warehousing needs, our automated technologies can be integrated to speed up productivity and lower costs.

For instance, our SmartLoader™ 24/7 automatic trailer loading AGV and SmartCart® automatic guided cart (AGC) can be programmed to work together, creating a dual workforce that delivers your product to exactly where it needs to be. Our Smart Systems reduce your risk of damaged inventory and spoiled goods, while protecting your equipment. And since they work around-the-clock, they never miss a deadline.

Also, when you work with Jervis B. Webb Company, we can help you figure out if you need other products such as conveyors or automated storage and retrieval systems (AS/RS) to help you keep things on track. It's the workforce of tomorrow, available today. Now that's Smart thinking.

Industries we serve:

Aerospace
Agriculture
Airport
Aluminum
Appliances
Automotive
Consumer Goods
Food and Beverage
Hazardous Materials
Hospitals
Manufacturing
Newsprint
Paint/Finishing
Paper
Steel
Warehousing/Distribution

Webb Airport Systems

Experience To Get The Job Done

In today's world of heightened security, a dependable baggage handling system is more essential to an efficient operation than ever. So whether you need a system for a brand new terminal or are updating the one you already have in place, you need a team you can rely on. Our engineers are known for designing dependable baggage handling systems for airports around the world. Individually, they're the brightest and best in the business. As a group, they're even better.

Together, Webb engineers have designed and installed baggage handling systems around the globe, completing each project without costly interruptions. Our in-line screening systems allow for automated security and minimal delays, while our innovative Webb-View controls make sure every bag reaches its destination.

Around the world, Webb has the people to get the job done and maintenance teams that will keep your system running at its peak performance.

Webb's baggage handling systems are currently in use at more than 50 U.S. and international airports, including:

- **Hartsfield-Jackson Atlanta International Airport**
- **Toronto Pearson International Airport**
- **Beijing Capital International Airport**
- **Boston Logan International Airport**
- **Miami International Airport**
- **Chicago O'Hare International Airport**
- **Chicago Midway International Airport**
- **Los Angeles International Airport**
- **Orlando International Airport**

Webb Automotive Systems

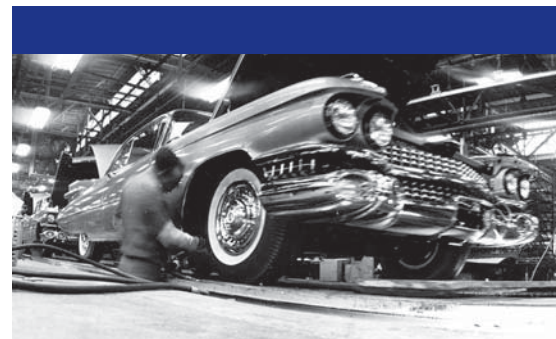

Our History Is Our Foundation.
Our Technology Is The Future.

In the automotive world, there's only one company that can say they literally revolutionized the way cars and trucks are built. In 1919, company founder Jervis B. Webb adapted a forged rivetless chain used in the mining business to the rugged needs of the automotive industry. Henry Ford quickly recognized the possibilities that existed with this innovative technology and installed 30 miles of Webb conveyor systems in his plants around the country. Costs were lowered, productivity increased, and it wasn't long before the entire automotive industry changed the way it did business.

It's that same forward thinking that Jervis B. Webb Company uses today to design material handling systems for automotive manufacturers worldwide. With an expertise that has evolved through the generations, Webb's engineers remain a step ahead of tomorrow's technology, continuously looking for ways to help automotive manufacturers meet their bottom lines.

In partnership with Webb's Smart Handling Systems, our automotive team is now creating integrated systems that automate entire plants – lifting and loading heavy materials, even turning manufacturing facilities into 24/7 workshops.

And because Webb's workforce spans the globe, we can deliver the most durable material handling systems, cost effectively, anywhere in the world.

Webb Aluminum Systems

Experience You Can Rely On.
Global Partners You Can Depend On.

For more than 50 years, Webb Aluminum Systems has been known for building the most durable and reliable aluminum handling systems in the world. But it's not just our systems that make us proud, it's the network of strategic global alliances we've assembled. Whether you're manufacturing in the barren fields of Iceland or the jungles of Nigeria, Webb has the knowledge and the partnerships it takes to do business on unfamiliar ground.

Our worldwide workforce and advanced technology have made us a leading provider for aluminum companies such as Alcan, Alcoa and BHP Billiton.

Whether you're constructing a new facility or upgrading an existing plant, our experienced engineers will work with you to design a power & free conveyor or Smart Handling System that moves materials efficiently and effectively, adapting to the way you do business.

And you can count on us to be there long after your system is installed. When you choose Webb, you've got a global partner you can depend on.

Webb Parts and Service

Keeping You Up and Running,
Around-The-Clock

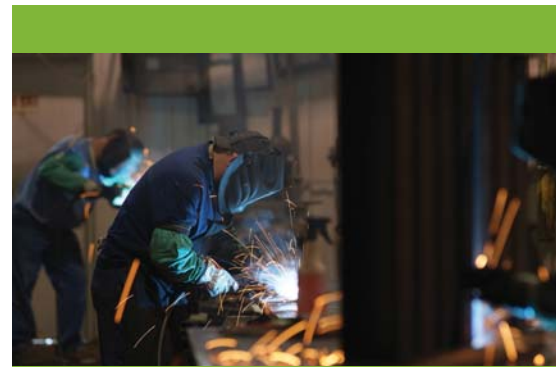

To keep your Webb system running at peak performance, you need genuine Webb Parts. While others may say they can deliver top quality, when time is money, you need to know that every part is as durable as your original system. Webb stands behind our parts the same way we do our product, which has earned us a reputation for being the gold standard in the industry.

Webb offers a complete line of 3", 4" and 6" chain conveyor components that are interchangeable with most major manufacturers. We also offer a complete line of Unibilt® enclosed track components, replacement parts for automatic guided vehicles, Smart-Carts®, roller conveyors, floor tow systems, and bag-gage handling systems.

Webb has an extensive inventory of parts available for all your system needs. Contact Webb or one of our qualified U.S., Canadian or global distributors to keep your system running like new.

When you purchase a Webb system, you don't just receive our product, you receive our commitment to keeping you up-and-running. That's why we developed WebbCheck, a program that's designed to make sure your material handling system is always functioning at full capacity. WebbCheck's pre-planned yearly inspections allow us to spot trouble before it happens. With WebbCheck, you can handle your day-to-day business knowing that you have an engineering team that's focused on your future.

That same team is there for you when you hit an unexpected slowdown. Whatever your problem, Webb can be there with the resources and experience to minimize down time.

Webb Worldwide

Global Resources To Keep
Your Company Moving Forward

Wherever you want it, whenever you want it, Jervis B. Webb Company has the global resources to keep your company moving. With engineering, manufacturing, maintenance and sales offices strategically placed around the globe, we have the long-term relationships required to understand local practices and overcome logistical challenges anywhere in the world.

Among the first U.S. industrial companies to do business in China, we've opened doors on nearly every continent.

Our worldwide workforce not only allows us to service companies around the globe, but also enables us to design material handling systems that can be built both efficiently and cost effectively.

Jervis B. Webb Company builds the most durable and reliable material handling systems on the market. When you work with Webb, you'll have a system that keeps your business moving forward and a support team that's always by your side.

Our History of Innovation is our Legacy

Helping You Move
Your Business Forward
Is Our Future.

Jervis B. Webb Company's history is immortalized in the Diego Rivera mural that covers the walls at the Detroit Institute of Arts. The artwork was commissioned to honor the assembly line worker. But at the same time, it captures the future of material handling innovation, in which technology is used to lighten mankind's burden. The assembly line that takes center stage in the famous mural was invented by Jervis B. Webb who helped change the face of automobile manufacturing.

In 1952, under the leadership of Webb's sons, Jervis C. Webb and George H. Webb, the company's innovative spirit expanded even further. The younger Webbs shared their father's passion and ingenuity, as well as his dream to engineer material handling systems that could benefit any manufacturer.

Today, our experienced engineers design the most durable and dependable integrated material handling systems on the market, increasing productivity and lowering costs for every industry.

You'll find our products in every industry and in every part of the world. While Webb's AS/RS systems are helping NASA build the next rockets for outer space, our conveyors are gently moving the musical instruments that will end up in your child's school and our SmartLoaders™ are making sure your beverages are delivered to grocery store shelves unbroken. The U.S. Mint counts on our AGV systems to move money, and you can count on us to customize a solution that will help you save yours.

Webb's Exclusive Line of Products

The Gold Standard in Material Handling

Automatic Guided Vehicles

SmartLoader™
SmartCart®
Smart T-Car™
Heavy-Duty
HV-3™

Conveyors

Heavy-Duty Roller	Skillet
Unibilt® Enclosed Track	Skid
Unibeam™ I-Beam	Friction
Overhead and Inverted	Floor
Power & Free	Electrified Monorail

Baggage Handling Systems

In-Line Baggage Screening System
